Aster Amazon

ELLIOTT'S ASTERS EXCEL

The Asters offered here are the result of many years hybridizing and selecting, which has resulted in a new development in these desirable flowers. Amazon, the original flesh pink, has become a standard variety with leading growers for market. I now have a full range of colors, with the same phenomenal growth and size. The plants grow three feet high with good cultivation, and the flowers resemble medium sized chrysanthemums, often over five inches in diameter.

AMAZON—A giantess among Asters. Flesh Pink Shaded Lavender; plants grow to a great height and produce very large flowers, with a great length of stem. The most beautiful Aster in existence.

BEAUTY—A delightful shade of Shell Pink; mammoth in size.

BLUE SENSATION—Azure Blue; a sensational variety in size and color.

BLUE PRINCESS—A lovely shade of Pale Blue; Victoria type.

Complete collection of the above 15 varieties, \$2.00.

ASTER "KING VIVID"—Our sensational new Red Aster. Bred and raised in our gardens at Park Ridge. This in our opinion is the most remarkable introduction in Asters, and the finest garden variety in existence. The growth is similar to the variety "Heart of France" but the blooms are produced in much greater profusion, and the color much more vivid. The blooms are perfectly double, with gracefully recurving petals, opening a deep Carmine, deepening to a vivid oxblood red as they unfold. The flowers keep in perfect condition when cut, and seed is perfectly true. There should be a place in every garden for this wonderful Aster.

Packets, 25c and 50c; $\frac{1}{4}$ oz., \$1.50; $\frac{1}{2}$ oz., \$2.50; 1 oz., \$5.00

NEW MERITORIOUS GLADIOLUS

AQUATINTE—A very distinct variety of enormous growth; one of the tallest and strongest growers we have. Color is Ivory White splashed Mauve, with a deep Carmine blotch on lower petals.

ORANGETINTE—Shown at the great Rochester Gladiolus Show, under the name of Improved Orange Glory, this variety was very favorably commented upon. It is a much improved form of Kunderd's variety "Orange Glory," much the same shade of beautiful Orange, but with larger flowers, heavily ruffled, more flowers open at one time on the stem, and every bulb produces a good spike. One of the faults of the original variety being that a considerable number of the bulbs failed to bloom.

ROSETINTE—One of the largest flowering Glads we have ever seen. Blooms are over five inches across and present an imposing appearance. A good grower, with a distinct shade of Deep Rose, with darker shadings.

Bulbs, large size, either of above varieties, each, \$1.00

ELLIOTT'S NEW BEAN

"MASTERPIECE" (Improved)—F. C. C. R. H. S. Trials, 1924.

This is not a selection of the original "Masterpiece," but is the result of scientific cross-fertilization.

This wonderful Bean achieved a remarkable distinction at the Trials of the Royal Horticultural Society at Wisley, England, in 1924.

It was the only Bean of American origin that ever secured an award from that Society.

The only Bean to secure the Society's First Class Certificate at these Trials.

The only stock (with the exception of "Mastodon" and "Mogol," both of which we raised and will introduce in the near future) out of over 200 stocks tested to be listed in the report of these trials as being distinct from any other, all the other stocks being bracketed in groups, as being the same variety under many different names.

As evidence of its superiority, the Society gave this Bean a higher award than it did the variety tested as the original "Masterpiece," introduced by Suttons, hitherto considered the best of its class.

We are not presenting an elaborate description of this splendid Bean, but offer it to our customers with the verdict of the Royal Horticultural Society as being the finest and most distinctive Bean offered to the gardening world.

¼ pint packets, \$1.00; ½ pint packets, \$1.75; pints, \$3.00

SIDELCEA

“ELLIOTT’S FAIRY QUEEN”—The Sidelceas are not very widely known, probably because existence varieties have very little to recommend themselves to flower lovers. This new variety, which originated at Park Ridge two years ago, however, is such a decided improvement in form and freedom of flower, besides being a most pleasing shade of color, that we feel fully justified in introducing it to our friends; in fact, we believe that when it becomes well known it will attain a high place in the estimation of the horticultural world.

The flowers of this charming novelty are a beautiful Rose Pink in color, with a pure white eye, produced in long, graceful spikes. The outstanding quality of this splendid subject, however, is the splendid habit of the plant, which is literally clothed with its beautiful flowers.

The plant is extremely hardy, requires considerable moisture during the flowering season, and requires to be closely grouped together in order to be seen at its best in the border.

Plants in Spring, out of two-inch pots, \$1.00 each; \$7.50 for ten.

Dear Sir:—The Sweet Peas I raised last year from your seed were by far the loveliest I have ever had.

Yours truly,

E. W. Felton.

Sweet Briar Farm, Geneseo, N. Y.

I want to tell you of the success I had with your sweet pea seed last year. They were admired by everyone who saw them, and admitted the finest ever seen in this district. Stems 15 to 20 inches, 4 and 5 flowers on a stem. When asked the secret of such fine flowers I would always answer, "Charles Elliott's selected seeds."
